

Coffee Breaks ① 10:30 AM PT ② 12:00 PM PT 15 mins

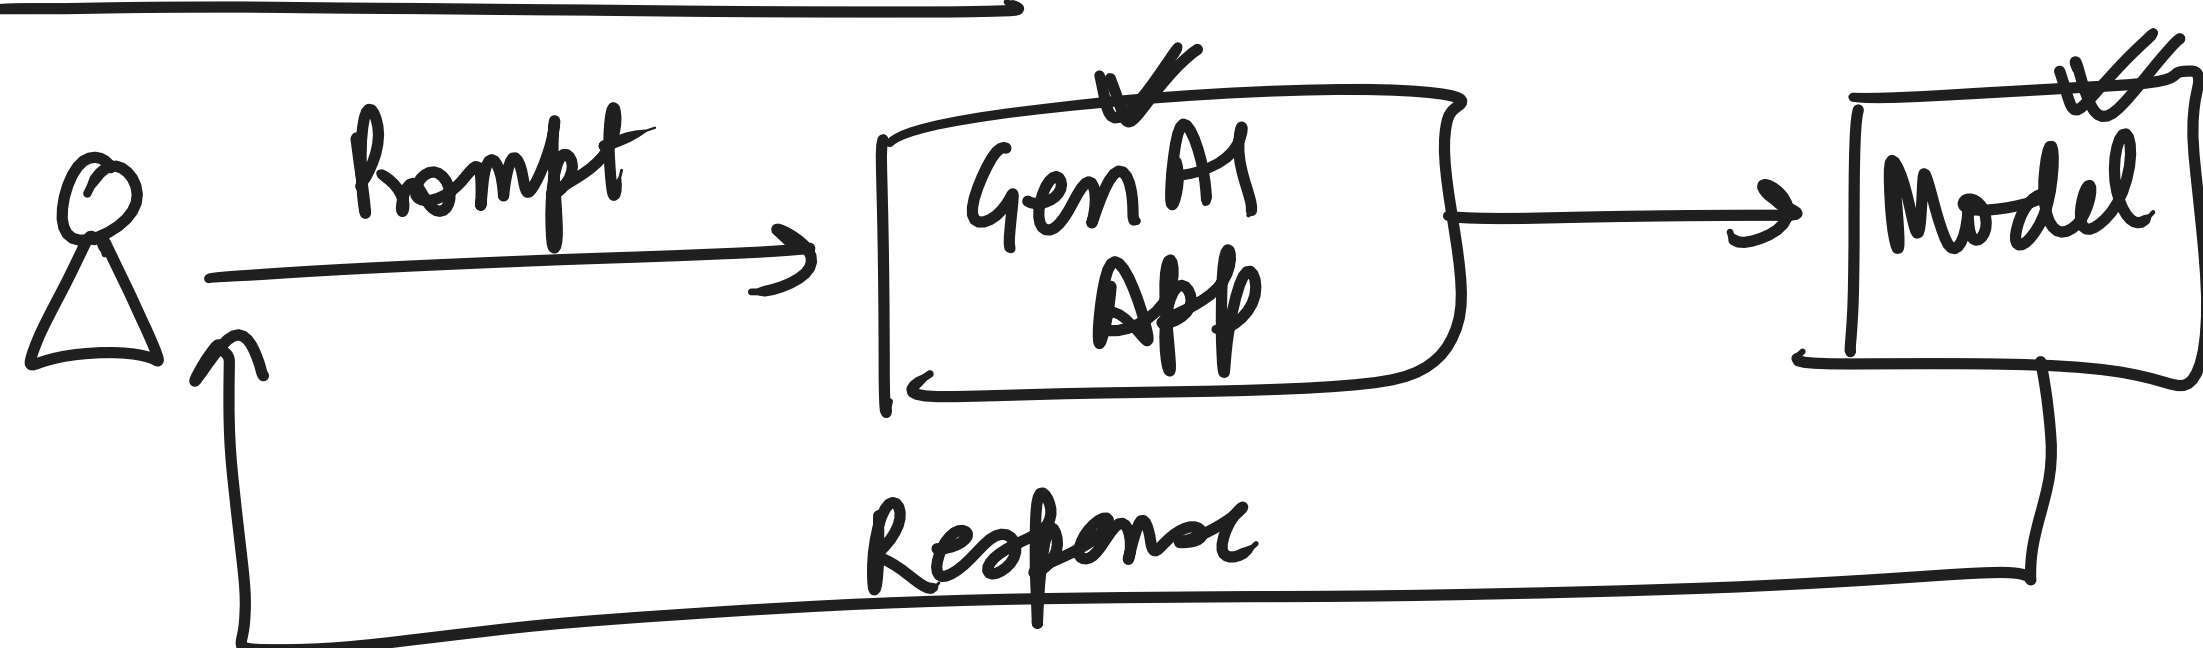

Yes = +1 , No = +2

"9:00 am to 1:00 pm PT"

Generative AI = "Create new" content, image, video, Text, code

use cases ① Conversational Application ② Text Generation ③ Code Generation ④ Text Summarization

Generative AI = Powered By FM/LLM, Foundation Model =

FM = "Pretrained Models" which are trained on "Internet" scale data (Raw Data)

Providers	Models
Anthropic	Claude family
Open AI	GPT
Amazon	Nova, Titan

"MultiModal" = Text, Image,

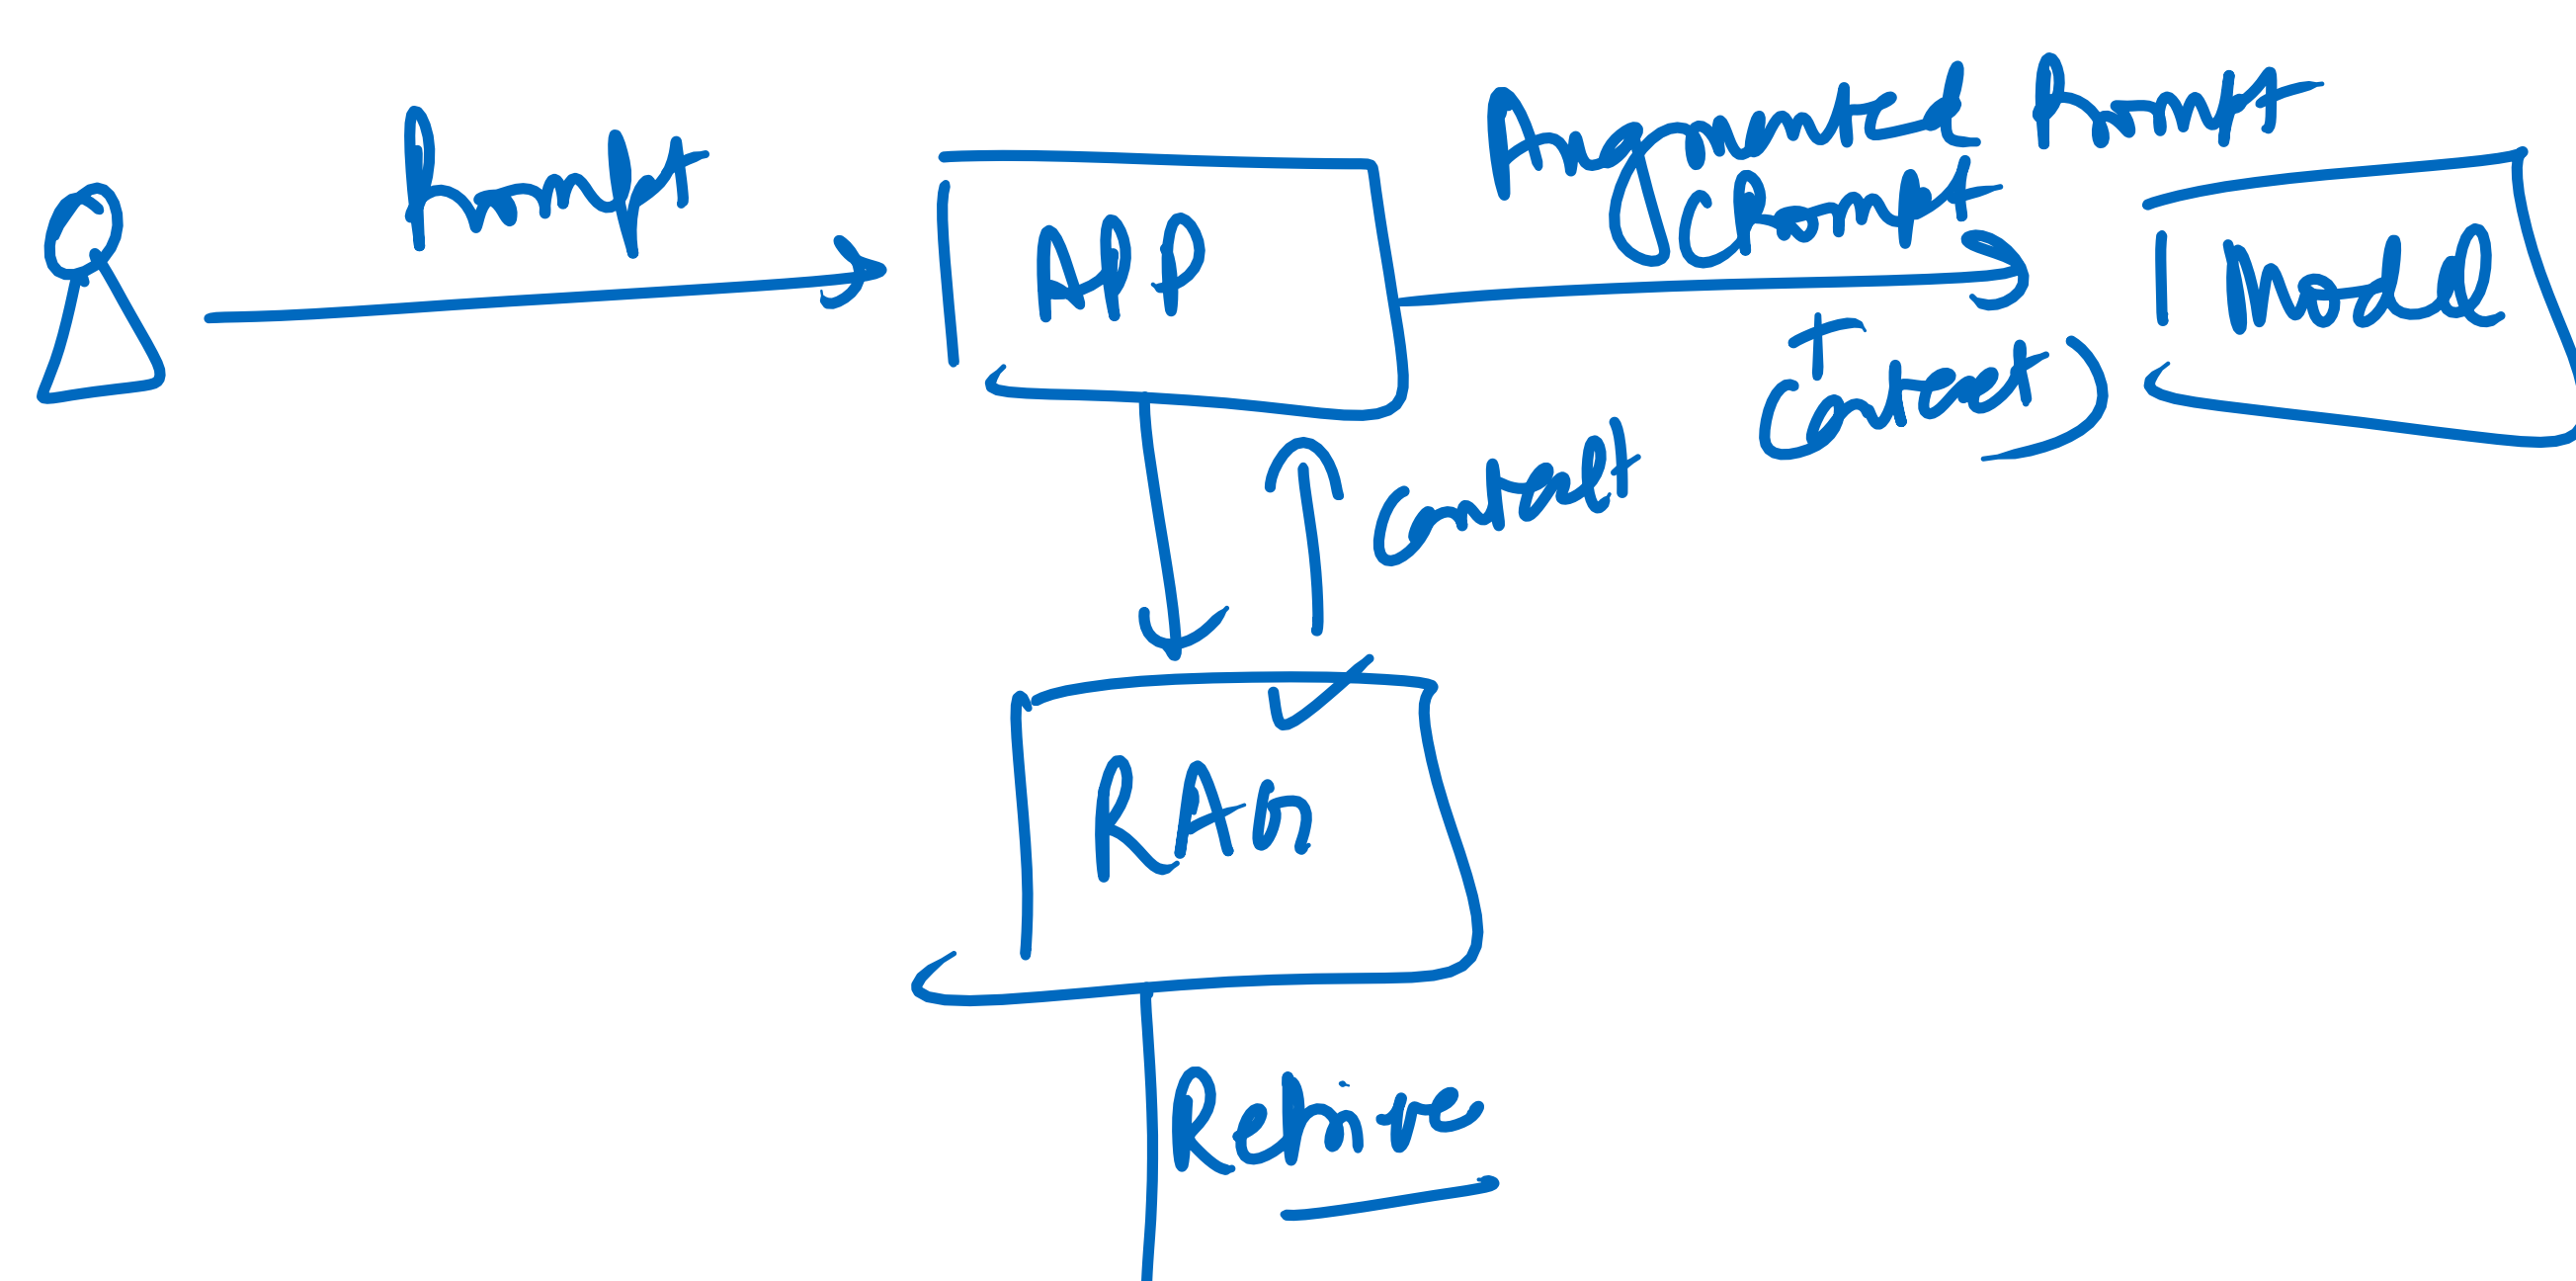

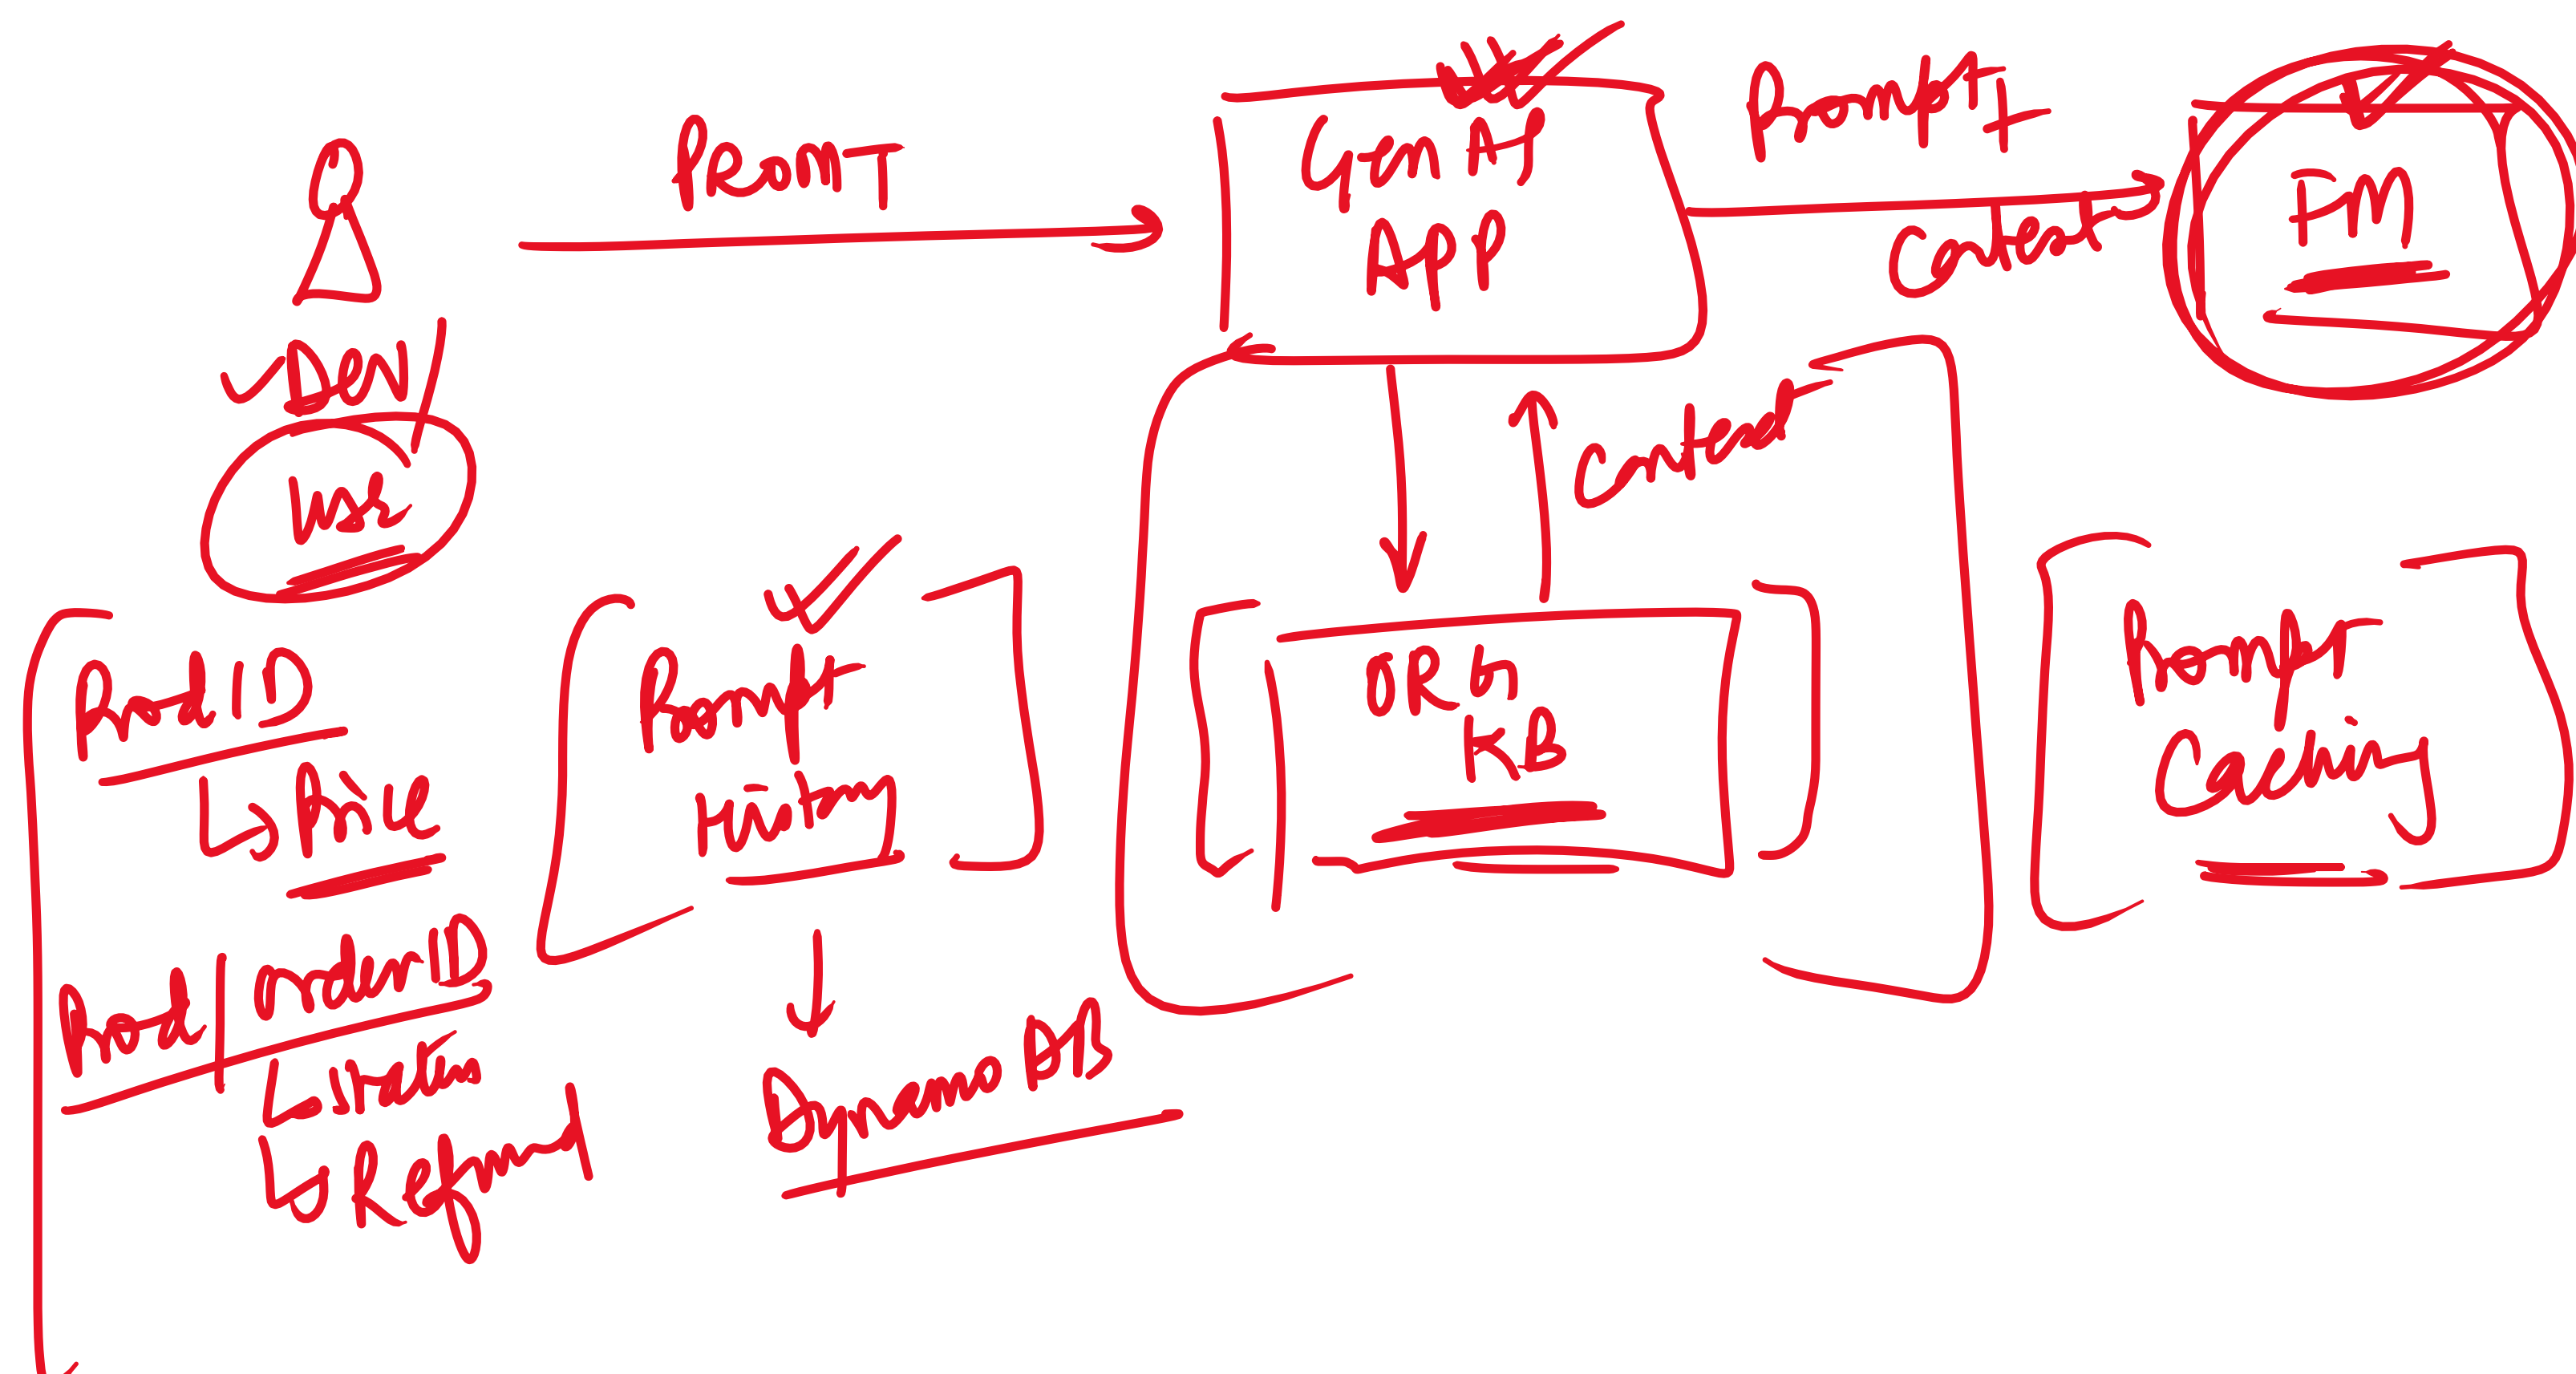

TRANSFORMER

- Input (Tokens + "Embeddings")
 - Text Broken into Tokens (words / Subwords)
 - Each Token is converted into numerical rep (vector)

Process of converting Tokens into vector = Embeddings

Ex: The | cat | sat | on | the | mat |
- Self-Attention (Core Idea)

↳ To understand context
- Feed-Forward network (neural network)

Inference parameters

- Temperature = Low → more determined & focused
High → more creative & varied
- Top P → limits tokens to top probability mass. 0.9 (90%)
- Top K → limits the vocabulary size / step.
Smaller → more focused, larger → more diverse
- max Tokens → maximum output length
- stop Sequences → Define termination strings
- Penalty (Jurassic) → Repeated topics / tokens / words
